

Showers, Pool Fencing and Balustrades

Nanokote surface treatment is UV stable, anti-stick and impervious to water making it suitable for both interior and exterior use. Nanokote protects against glass corrosion and calcium staining, preventing dirt and contaminants found in our water bonding to your glass. This dramatically reduces cleaning time whilst protecting your investment and the environment. Our professional application gives you easy to clean glass and ceramics with a full ten year guarantee.

Say goodbye to your dull water stained shower screens and pool fencing!

The experts in easy to clean, anti stick protective coatings for glass and ceramics

Would you like more *you* time?

Say goodbye to your foggy and stained shower screens. Say hello to more YOU time. No more wasted hours scrubbing your shower glass and tiles. Your glass shower screen and tiles will be easier to clean and remain as new after a Nanokote treatment.

Take life a little easier - you deserve it !

A once only application of Nanokote's revolutionary surface treatment can cut cleaning time by up to 90%. We guarantee every application - for up to 10 years. The results are unbelievable!

Discover how Nanokote WA is making a difference

- Delivering the best environmentally friendly solutions
- Using revolutionary nano-technology
- Providing the most advanced durable glass coating
- Professional, fully trained and accredited applicators
- Superior customer service and consistent results
- Reliable 'on time, every time'
- Use the area as little as an hour after application

Nanokote - why it's the best!

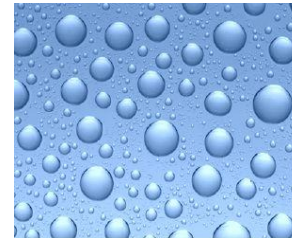

Developed and manufactured in Australia, Nanokote is a division of Micronisers Pty Ltd which has worked with the CSIRO in researching nanotechnology for 15 years. In a recent independent test Nanokote is shown to be the most effective and durable glass and ceramic coating on the Australian market today.

Nanokote permanently seals the surface enabling the water to bead on the surface. This protects the glass from any build up of contaminants found in our water.
